827         lt_cofi_iccf TYPE  TABLE OF cofi_iccf WITH HEADER LINE,
828 * dummy; use debit/credit indicator in any case to determine
829 * the account for non-clearing lines:
830         lb_dummy      TYPE  flag.
831
832 * fill structure for account determination:
833 * only the fields are filled which also exist in the
834 * DDIC structure FAGL_COFI_ACCDET_FIELDS,
835 * since only these fields are also available in the CO summary
836 * records. This way it is ensured that executing the
837 * account determination based on CO summary records (in reconciliation
838 * reports) will yield the same accounts as in the online posting.
839 * —> Attention: With OSS note 897454 the logic is changed back again!
840 * Now also the partner fields and fields which are not in the CO summary
841 * record are filled again (also requirement from public sector)
842
843 * in reconciliation ledger, the field cofi_iccf-drckr
844 * contained only the two values S or H; in the online reconciliation
845 * we can offer more information to the account determination:
846 * coep-beknz contains also A or L which was mapped to H in reconc.
847 * ledger. Some customers wanted to have also A and L values available
848 * in the account determination. Because of this, we offer it now:
849     ls_cofi_iccf-beknz      = is_coep-beknz.

```

```
